

Flats

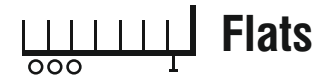

Montracon 
the trailer for road transport

Flats

Montracon exploits fully the versatility of the flat platform trailer, specifically in producing a range of model derivatives, including dual purpose units that offer the flexibility to handle a wide and diverse range of payloads, a flexibility unmatched by any other trailer type. In straight frame trim, the Montracon flat platform can also be supplied complete with twistlocks to carry ISO containers and/or with stanchions/sockets to contain payloads as diverse as logs and equipment for drilling rigs. In addition, it can be fitted with dropsides or be supplied with an integral coil well to carry steel rolls. Fixed or removable headboards are offered at 750, 1000, 1500, and 2000mm heights including ENXL variants. Specification of the 'toe out' heavy duty side rave provides an alternative 'hook' for load straps. Other models include a rolling tilt or, indeed, a rolling or centre mounted crane for handling 'heavy side' building and construction materials, notably bricks and blocks.

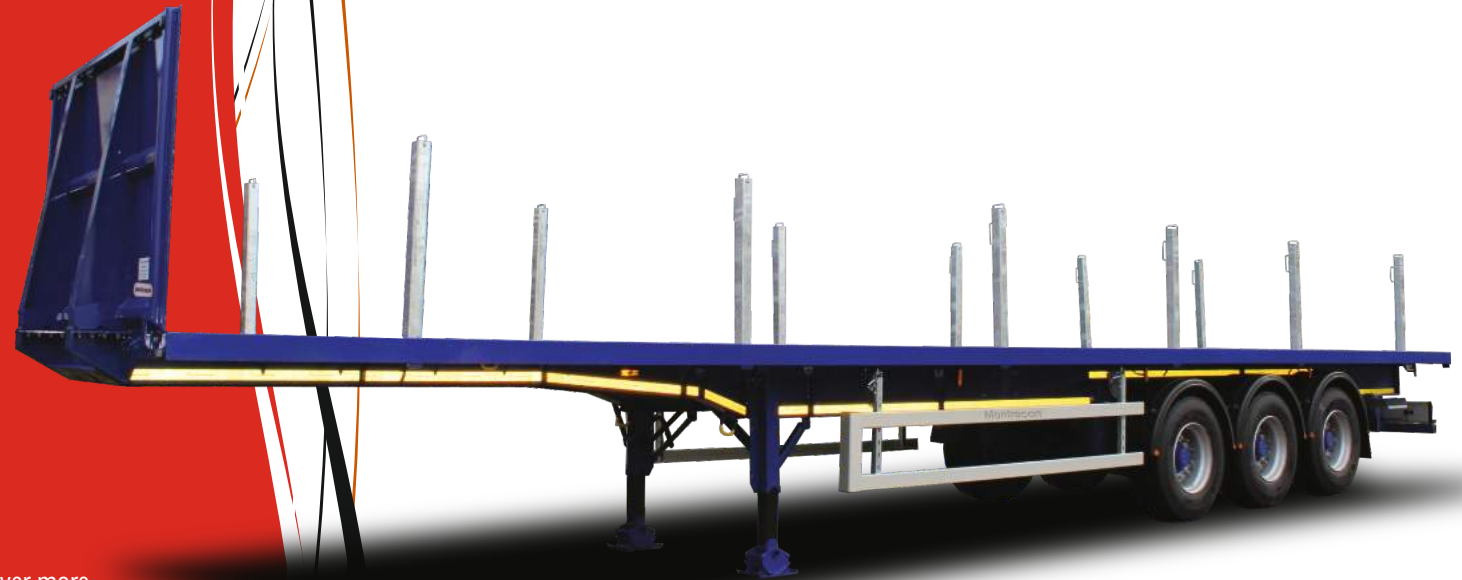

For specialist operations, Montracon offers the extendible or trombone trailer. It stretches to accommodate indivisible loads such as beams and bridge spans. Last but not least, Montracon offers a step frame model used typically to move light plant and equipment. Add this to Montracon's reputation for low overall cost of operation, with durability and longevity forged over more than 40 years of supplying the road transport, building and construction industries, and the result is hard to beat. Standard spec trailers are fitted with drum brakes and are available ex-stock, with a range of popularly specified options pre-engineered and available for fitting either on or off line to aid fast delivery. In addition, Montracon's engineers work closely with customers to develop bespoke designs matched to meet exact operating requirements.

Main Features

Renowned for their quality, reliability and longevity, Montracon's flats have an enviable, proven performance record across the road transport industry.

- 125 x 75 x 10 RSA heavy duty angle side rave
- 15mm thick main beam flange as standard
- 29mm hardwood floor
- Rope hooks to every bearer and to the front and rear for improved roping and sheeting
- Post / sockets positioned to suit customer requirement
- 1.0m. 1.5m. 2.4m length and offset posts available

Variants

The flexibility of the flat trailer is clearly reflected in the number of variants offered within Montracon's flat platform range.

Stepframe Flat

Stepframe versions typically carry light plant equipment and can be supplied with clip-on ramps both at the rear and at the neck.

PSK's

The platform skeletal is supplied with recess twistlocks and doubles as either a skeletal to handle the full range of ISO containers or as a flat/platform.

Extendable Flat

The extendable or trombone trailer stretches to accommodate indivisible loads such as beams and bridge spans.

EN12642XL Rated Headboard

For all your heavy duty applications.

Scaffold Trailer

Offering a transport solution to the scaffolding sector.

- Single or tandem access, short wheelbase
- Straight or stepframe
- Standard scaffold sockets
- Heavy duty steel high headboard

Urban Flats and Extendables

Ideal for accessing those hard to reach places

- Single or tandem access, short wheelbase
- Various lengths
- Rear steer
- Post and sockets
- Twistlocks

Coil Carrier

An integral well housed beneath removable floor covers coil carriers the added flexibility of the 'flat' to handle return loads and thus boost operating efficiency.

Brick-n-Block

A wide range of options for the brick and block sector including fixed rear and centre mount or rolling cranes, dropsides, mesh or curtainsides and 'drop and go'.

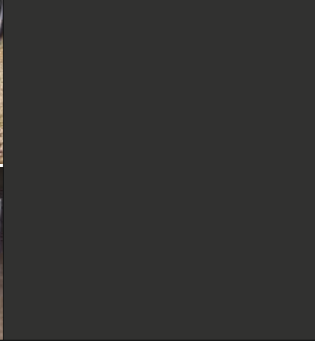

Features

As one would expect from a company with over 40 years experience in trailer manufacture, Montracon flats are offered with a wide range of options designed to match an equally wide range of operating requirements.

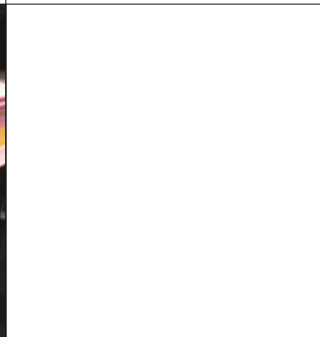

The platform skeletal is supplied with recessed twistlocks and doubles as either a skeletal to handle the full range of ISO containers or as a flat platform.

Underslung tool/ equipment storage boxes available as an option.

Channel section side rave is offered as an alternative to the standard heavy duty rave.

The option of sockets and stanchions extends the load versatility of the flat to include the movement of all from logs to oil field drilling equipment. Stanchions are neatly stowed beneath the frame or on the headboard for flat platform operation.

29mm Keruing hardwood floor as standard, with other floor types available.

Special design headboards available to suit customer requirements.

Whatever your trailer requirement may be and wherever in Britain and Ireland you are, we will be happy to visit and to discuss how Montracon can best meet your needs.

Montracon reserve the right to change specification and the status of standard optional features at any time.
